Rocklin Company Receives 2 US Patents

Rocklin business owner and inventor Robert Lenney announced today that his company has received two more United State Patents for his unique gutter guard technology. Ironically, one of the patents is for his Gutterglove IceBreaker gutter cover creation issued on a cold winter day by the US Patent office just a few days ago on December 20, 2011.

IceBreaker is a heated gutter guard that melts icicles, snow loads and ice dams on your gutters, as well as filters out leaves, pine needles and roof sand grit so ice problems and gutter cleaning is a thing of the past.

This unique design incorporates a self-regulating heat cable that installs in a built in channel in the gutter guard itself. When turned on, it radiates heat for melting ice in the gutter and on itself and prevents icicles and snow loads from forming on the gutter.

Multiple US Patent holder Robert Lenney, inventor of IceBreaker, says that his heated gutter guard is unique and can eliminate icicle fatalities.

“Since ice can’t form on your gutters when IceBreaker is installed, the liabilities of falling icicles are virtually eliminated,” says Lenney.

IceBreaker is also a Green eco friendly product because it requires only one heat cable to do the job whereas other heated gutter guards still require two to three cables.

The second patent recently issued is for his Gutterglove Pro gutter cover, which Lenney invented in 2003 and Consumer Reports magazine rated it the highest in its September 2010 and May 2011 magazine issues. This will be the second patent for his pro line product, so now he has three in all.

Both gutter guards are made from type 6063 anodized aluminum that supports a fine type 316 stainless steel micro-mesh for filtering out organic debris from your gutter.

A short performance video of the heated gutter guard can be seen on YouTube at:

With IceBreaker, you can also perform snow harvesting, also referred to as rain harvesting. Your gutter allows the melted snow to flow to your rainwater storage tanks which can be used later for a variety of water uses.

The manufacturing company continues to sore in sales with a 60% increase in 2011 over 2010, and the same increase from 2010 over 2009. With the continued growth in sales of this magnitude, cash is always in demand to manufacture the product. They are now seeking lending institutions or Angel investors who can help with manufacturing product to meet the increasing demands of its customers throughout North America.

Lenney isn't stopping with North America as the limit to its market potential, he's thinking global.

"I'm working with companies in the UK, Africa and Portugal who really want our products", Lenney said. "I'm fortunate that these and other countries are decades behind in gutter guard technology, which could make our gutter guards a goldmine there."
