### Gutterglove's CAD Drawings Help Architects

In an effort to improve the marketing wheel and to get ahead through this recession, a company called Gutterglove Gutterguard has created numerous gutter guard CAD drawings to assist the architect. Being that there are hardly no manufacturers that provide their gutter protection systems in dwg or dxf, this company decided to create it's own CAD files in hopes that a new target market could be found. Robert Lenney, the inventor of the popular Gutterglove gutter protection systems did just that.

"In an effort to try and increase our market share in the U.S. and help fight our way through this economy, I thought I would create these drawings in hopes that architects would be interested and actually include them in their building plans," says Lenney. "I haven't seen any gutter guard company do this."

The drawings are free and are available in dwg, dxf, jpg and pdf through the [www.Gutterglove.com](http://www.Gutterglove.com) website under the downloads tab. Virtually all gutter types are included in the CAD drawings including ogee, fascia, curved and half round. An assortment of roof types are also included with each.

The U.S. patented Gutterglove gutter guard system is made from a super fine type 316 stainless steel mesh, similar to the filters found in a coffee maker for keeping the coffee grounds out. This mesh filters out leaves, pine needles, seed pods and even sand, which is why it's so popular amongst homeowners and rainwater harvesters. No more gutter cleaning ever again with Gutterglove. The mesh is supported with a hardened anodized aluminum frame.

To assist the cost conscious homeowner, the Gutterglove company recently invented two low cost gutter guards. One is now the lowest cost mesh-filtering gutter guard in the country. Lenney says it's a breakthrough design in fine mesh gutter guards.

"The reason mesh type gutter guards are expensive is because they all have some type of support bracket underneath to hold up the mesh, " comments Lenney. "We now offer a new design that doesn't require a support bracket, and so now we can reduce the price by over 50% to the contractor and homeowner alike for this particular model."

Lenney is referring to LeafBlaster gutter protection, his lowest cost gutter guard now. He also recently invented a mid-grade cost gutter guard call Gutterglove Ultra, which also sports the fine stainless steel mesh.

Lenney invented yet another gutter guard this year, and it's a heated gutter guard. It's called Gutterglove IceBreaker, and it's a true breakthrough design to help in the much needed icicle hazard areas of the world. IceBreaker melts icicles, snow loads and ice dams on your gutter,

and at the same time filters out leaves, pine needles and tiny roof sand grit so gutter cleaning and falling icicles are a thing of the past.

Gutterglove IceBreaker incorporates a self-regulating heat cable that installs in a built in channel in the gutter guard itself. It efficiently warms up the gutter guard and inside the gutter for melting ice that has plagued homeowners for centuries from falling icicles. When Gutterglove IceBreaker is turned on, it not only melts the ice, but prohibits icicles from forming on the gutter.

Lenney can also provide additional CAD drawings if an architect can't find exactly what they are looking for on their website. Not long ago they had a request for Gutterglove on a standing lock seam metal roof with a box style gutter, which they didn't have drawings for yet, so Lenney made a quick turn around and provided the firm with the drawings to their satisfaction.

Lastly, all three new gutter guards have extensive patent pending applications filed at the U.S. Patent Office. Lenney found it prudent to not only cover the basics of their new designs, but to also cover every conceivable way of reverse engineering them.

This makes six gutter guards in all for the Gutterglove company, and they all boast the fine type 316 stainless steel mesh technology that homeowners rave about.

With the advent of his new gutter CAD drawing downloads page, and his new product line, and a completely new remodeled website, more info can be obtained at [www.Gutterglove.com](http://www.Gutterglove.com).

### **About Gutterglove Gutterguard**

Gutterglove Gutterguard was founded in 2003 and has offices in Rocklin California, and dealers located across the country. Gutterglove was awarded a U.S. Patent in 2007 for his core gutter guard product and continue to invent state-of-the-art technology in the gutter guard industry. For more information, call 877-662-5644, or visit: [www.Gutterglove.com](http://www.Gutterglove.com).

Robert Lenney is also Accredited Professionals through the American Rainwater Catchment Systems Association ([www.arcsa.org](http://www.arcsa.org)).
